NEW PERSPECTIVES ON NORMATIVITY

Joint Lecture Series
'International Law and Technology'

University of Amsterdam, Faculty of Law, Amsterdam Centre for International Law (ACIL)
Université catholique de Lille, Faculty of Law, Research Centre on Risk & Law (C3RD)

Conveners:
Dr. Delphine Dogot
Dr. Andrea Leiter

Digital Technologies are changing the modes in which law and governance operate, opening up toward new perspectives on normativity. How to think the relationship between international law and technology and its implications for normativity? What are the topologies of normativity that these terms connote? What must legal reasoning become to better attend to techno-legal assemblages?

These questions are leading to the emergence of a new scholarly field revolving around 'international law and technology' with new theoretical and methodological approaches, new assumptions and preoccupations and new modes of working across disciplines. In this lecture series we bring together leading scholars in international law, international relations and legal theory to present their work and discuss the implications of an ever increasing digitization of socio-economic life.

The lecture series is held on Mondays from 15.30-17.00 every three weeks alternating between the University of Amsterdam and the Université Catholique de Lille Paris Campus. All lectures will also be accessible in a hybrid format via Zoom. A short text will be distributed approximately one week before the sessions to registered participants.

Programme

1. **Opening conversation** with Matilda Arvidsson (Gothenburg University), Fleur Johns (UNSW Sydney) and Dimitri van den Meerssche (Queen Mary University)
   31 January, 12.00-13.30
   location: University of Amsterdam Law School, REC A.3.01

2. **New Modes of Law-Making and Resistance in the Digital Age**
   Rebecca Mignot-Mahdavi (University of Manchester)
   20 February,15.30-17.00
   location: Paris Campus
